External to AutoCAD the AutoCAD Systems Management Pack (AutoCAD-SMP) allows the installation and maintenance of AutoCAD on the Microsoft Windows operating system. AutoCAD runs on many other operating systems, including Microsoft Windows (from Windows 2000 onwards), Linux, macOS, Solaris, SunOS, BSD, QNX and Windows CE. Support for Windows CE was dropped in AutoCAD R13, Linux and Solaris versions were added in AutoCAD R13, macOS and BSD versions were added in AutoCAD R14. The Android AutoCAD app allows Android smartphones to access AutoCAD drawings. On the R13 release, Support for Windows NT4 was dropped. AutoCAD is also available as a part of the Google Cloud Platform, starting with AutoCAD 2018. History AutoCAD started out as the largest CAD program available. In the early years, it featured a graphical interface and could work with a number of different data types. Over the years it has evolved and there are now different interfaces available. As of the 2010s, new versions of AutoCAD are released about once every year. The newest version of AutoCAD is the 2020 release, which was launched on September 24, 2019. The first release was in 1982. Version history AutoCAD 2 Version 2 of AutoCAD introduced a new high level of control over CAD data through AutoLISP, plus object oriented technology. It also included 3D views, and external file converters. With AutoCAD 2, CAD data could be shared with other CAD systems. AutoCAD 2 was the first version of AutoCAD to be released for the Apple Macintosh. By 1991 it had overtaken TopoPro, and was used by the majority of major firms in the United States and around the world. Version 2 was not well received, and was a commercial failure. It was not supported by its developer, and the company that owned it, CAD Associates, closed up shop in 1991. In 1993, CAD Associates' technical director sold the rights to AutoCAD 2 to the now-famous German company Inventec. Version 2 is still one of the most widely used, with many firms continuing to use it and download the support code from a third party server. AutoCAD 2L (2012) AutoCAD 2012 a1d647c40b

The goal of this study was to determine the effect of the alpha and beta adrenergic agents, epinephrine and norepinephrine, on myocardial viscosity and to develop a new method of measurement. Fifty-five male Sprague-Dawley rats weighing between 300 and 400 g underwent thoracotomy under ketamine-xylazine anesthesia. Two 10-gauge latex-filled vascular access probes were inserted into the right carotid and right external jugular vein, and through the left carotid artery, and left atrium, respectively. Rats were studied in the first 10-min control period, after the administration of 100 micrograms/kg epinephrine, 1 mg/kg norepinephrine, and 1 ml NaCl 0.9% into the left atrium, and in the second 10-min control period. Left ventricular, aortic, carotid, and jugular venous blood pressures were obtained. The rats were then killed, and the weight of each heart was recorded. A new method was developed for measuring the viscosity of the myocardial tissue. Right ventricular, left ventricular, and aortic viscosities were calculated from the measured pressures and the corresponding venous and arterial blood flow rates. During the administration of epinephrine and norepinephrine, the right ventricular, left ventricular, and aortic viscosities were significantly reduced (P
